

## Focus on Innovation, not Complexity with IB360

**As a hardware integrator** in the rapidly evolving field of biometrics, you understand that creating cutting-edge devices is only half the battle. The real challenge lies in ensuring your hardware seamlessly integrates with a wide range of identity management applications. IB360 is the game-changing software suite that bridges the gap between innovative hardware and practical implementation.

Designed by experts who design biometric products, IB360 is designed with hardware developers like you in mind. This comprehensive software toolkit empowers you to showcase the full capabilities of your biometric devices, from fingerprint scanners to facial recognition cameras and beyond. By providing a robust, flexible framework for integration, IB360 ensures that your hardware doesn't just work—it excels.

Choose IB360, and you're not just getting a software suite—you're gaining a powerful ally in the biometrics industry.

### Extend and Add Value to Your Products

#### Incorporate IB hardware and others into complete solutions

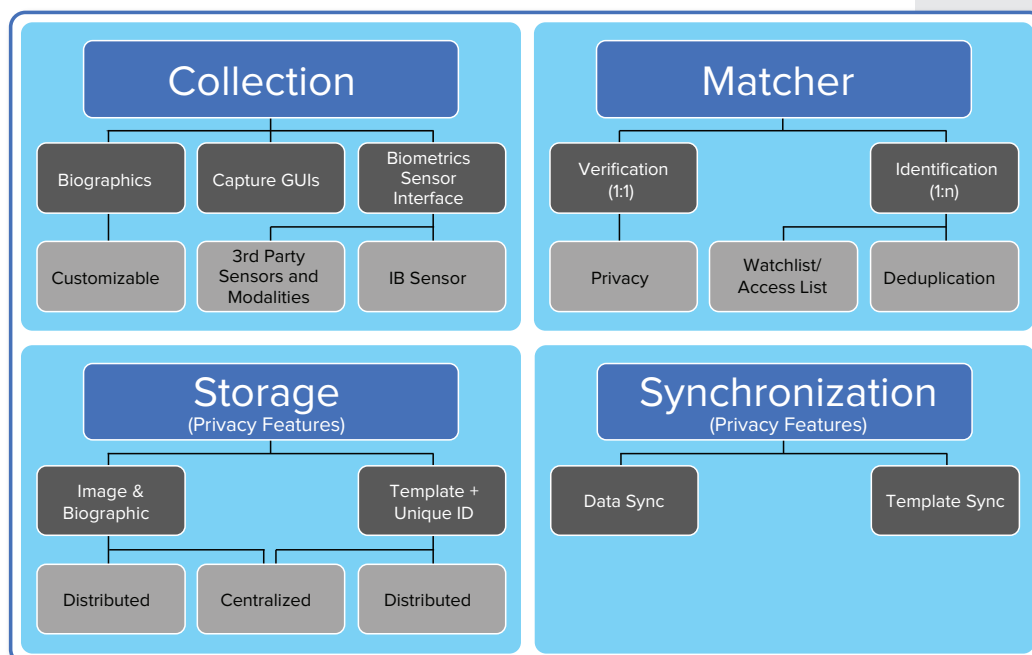

- Easy to use
- Supports various use cases
- Quick to integrate
- Synchronize between devices

#### Move from a commodity supplier to a valued solution provider

- Easy to integrate
- Move closer to customers
- Create recurring revenue

#### Shorten the sales cycle

- Rapid prototyping

*IB360 brings it all together by providing simple, off-the-shelf functions like Enrollment, Identification and Verification.*

*Set preferences and parameters such as capture overlays to be used during the biometric data collection process.*

*Demo screens display the ease with which IB360 can be configured, from working with biographic data to adding functionality such as Enrollment, Identification and Verification.*

## Addressing Integrator Pains

### **Manufacture easy-to-use hardware platforms that address multiple use cases**

- IB360 is a modular software platform that integrates quickly
- Allows for automated and recoverable synchronizing of devices
- IB hardware is tightly integrated with IB360

### **Reduce reliance on outside integrators and suppliers**

- Shorten development cycles and differentiate your offering
- Offer a pre-integrated part of the value chain normally left to custom developers

### **Add software to your value chain without large investments in engineering and support**

- IB360's simplified SDK is easy to integrate into most platforms
- IB will maintain and support the core platform

### **Create recurring revenue streams and get closer to customers**

- Modular licensing makes it easy to price and resell
- Leverage synergy between IB360, IB hardware and contactless fingerprint offerings
- Create recurring revenue streams that are sticky and extensible

*We get it. We've been there, and we feel your pain. IB360 helps you overcome integration hurdles, showcase your hardware's full potential, and open doors to new markets and applications. Focus on what you do best while IB360 handles the complexities of software integration.*

**Experience the IB360 advantage and build your own biometrics.**
